What to charge once 3D is on

A try-on costs us about KES 11 and sells for KES 25. A 3D spin costs between KES 48 and KES 78 depending on which Meshy plan we are on — three to seven times a try-on. That single fact decides everything below: the spin cannot be bundled, cannot be free, and cannot be priced like a try-on.

1 · What each thing costs us

	SAVER (ON NOW)	PREMIUM AI	SOURCE
One Standard try-on, all in	KES 11.00	KES 17.00	measured, includes redos
Reading a garment photo	KES 0.10	KES 2.98	measured, paid once per piece
Reading a body	KES 0.23	KES 7.12	measured, paid once per photo set

A 3D spin, by Meshy plan (30 credits per textured model):

MESHY PLAN	USD / MONTH	CREDITS	PER SPIN	SPINS INCLUDED
Free	free	100	—	3
Pro	\$20	1,000	KES 77.6	33
Premium	\$40	3,000	KES 51.8	100
Ultra	\$100	8,000	KES 48.5	266
Studio (team)	\$70	5,500	KES 49.4	183

Premium is the first plan where a spin makes money at a sane price. Pro looks cheaper but its credits cost twice as much, and the free plan's 3 spins a month are for testing, not selling.

These are the API numbers, not just the website's. Meshy charges no separate API fee and sets no monthly API minimum: calls from our server spend the same credits the plan includes, at the same rate, and API access begins at Pro. The one figure not published is the price of a top-up pack bought outside a plan, so check what checkout says before buying credits that way.

2 · What a spin has to cost the shopper

Credits are bought at different rates: KES 25 each in the two-for-fifty pack, KES 22.50 each in the bundle of twelve. A spin must clear its cost at the **cheapest** rate, or bundle buyers spin at a loss.

SPIN PRICED AT	SINGLE RATE (KES 25)	BUNDLE RATE (KES 22.50)	KEPT ON PREMIUM	KEPT ON PRO
2 credits	KES 50	KES 45	KES -13.6	KES -39.5
3 credits	KES 75	KES 68	KES 5.4	KES -20.5
4 credits	KES 100	KES 90	KES 24.5	KES -1.4
5 credits	KES 125	KES 112	KES 43.5	KES 17.7

Four credits — KES 100 at the single rate, KES 90 in a bundle. On Premium that keeps about KES 25 even for the deepest bundle buyer. At three credits the margin is thin enough that one refund wipes out three sales; at two credits every spin loses money on every plan.

3 · The price list to publish

WHAT	CREDITS	PRICE (SINGLE RATE)	COSTS US	WE KEEP
Standard try-on	1	KES 25	KES 11.0	KES 10.2
HD try-on	2	KES 50	KES 12.1	KES 30.3
Studio try-on	4	KES 100	KES 13.8	KES 71.0
3D spin (new)	4	KES 100	KES 51.8	KES 32.9

HD and Studio cost barely more to draw than Standard but sell for two and four credits, so they are the most profitable things on the list. The spin is second. Keep pushing both.

The packs as they now stand. All of them work with a four-credit spin:

PACK	CREDITS	PRICE	PER CREDIT	BUYS
Two try-ons	2	KES 50	KES 25.0	2 try-ons
Launch offer (first buy)	3	KES 50	KES 16.7	3 try-ons
Try it and spin it	5	KES 110	KES 22.0	5 try-ons or 1 spin
Bundle of 5	5	KES 120	KES 24.0	5 try-ons or 1 spin
Bundle of 12	12	KES 270	KES 22.5	12 try-ons or 3 spins

✓ **Try it and spin it — 5 credits for KES 110 — is live.** One try-on plus one spin with a small discount: the journey we want people to take, and at KES 22 a credit it still clears cost.

4 · How many Meshy credits to buy

STAGE	PLAN	COST	CREDITS	SPINS	WHAT IT PROVES
Testing now	Pro, first month 50% off	\$10	1,000	33	Does the mesh look right on real pieces
First paying month	Premium	\$40	3,000	100	Do people buy a spin at KES 100
If demand holds	Ultra	\$100	8,000	266	Volume before self-hosting pays

Meshy gives 50% off the first month, so the \$10 already set aside buys Pro and 33 spins — enough to test a dress, a trouser, a jacket, a satin piece and a lace piece several times each and still have spins left for the ad. Do not subscribe to Premium until spins are being sold.

5 · When to stop paying Meshy

SPINS A MONTH	MESHY PLAN NEEDED	MESHY COST	SELF-HOSTED (TRELLIS 2)	SAVING
30	Pro	KES 2,588	KES 6,120	KES -3,532
100	Premium	KES 5,176	KES 6,400	KES -1,224
266	Ultra	KES 12,940	KES 7,064	KES 5,876
500	Ultra x2	KES 25,880	KES 8,000	KES 17,880

The self-hosted column carries KES 6,000 a month of idle workers, storage and attention on top of KES 4 a mesh. Self-hosting only wins past roughly 250 spins a month, and it buys a GPU to babysit. Until then Meshy is the cheaper answer even though its per-spin price looks high. The engine is a setting in Admin, so the switch is a dropdown on the day the table above flips.

6 · The decisions, in one place

Spin price: 4 credits — KES 100 on its own, KES 90 inside a bundle. Set, and changeable in Admin.

Plan: Pro at \$10 for testing (first month half price), Premium at \$40 the month spins go on sale.

Try-on prices do not change. KES 25, two for KES 50. They work and they are what the ads say.

Try it and spin it — 5 credits for KES 110 — is on sale, one try-on and one spin together.

Never bundle a free spin. One free spin costs more than a paid try-on earns.

Review at 250 spins a month, when self-hosting starts to pay.

7 · Where this stands today

	STATE
Spin price set to 4 credits	live in the database
Try it and spin it pack, KES 110	live and on sale
3D consent, asked at the first spin	live - request_mesh refuses without it
Mesh table, private bucket, refund path	live
mesh-create / mesh-status functions	deployed
MESHY_API_KEY on the server	NOT SET - add in Edge Functions, Secrets
mesh_mode switch in Admin	OFF - turn on after the key is in

Nothing above needs a deploy to change. The spin price, the engine and whether 3D shows at all are settings in Admin, so the day Meshy gets expensive or a cheaper engine is worth running, it is a dropdown rather than a release.

The number to watch: what share of paying shoppers buy a spin. Under roughly one in six, 3D is a demo rather than a business and the Meshy bill should be switched off, not optimised.
